

The MFC Rescue Dry suit features an optimised fit with a super stretch neoprene neck for improved warmth, durability, and comfort. The front dry TiZip zipper (protected by an additional semi-dry zipper) allows you easily dress and seal the suit. The elasticated waist, velcro adjustable belt and internal elasticated braces aid performance and comfort during use.

Reinforced knees, elbows, seat and socks ensure the suit's durability, while a relief dry zipper is fitted for comfort. Reflective bands on feet and arms are included for enhanced low-light visibility.
