

The UtilityLite is a continuous flex of LEDs (180 per metre) encapsulated in a clear, hardwearing flexible plastic sheath. Assembled on a cable reel the unit is highly portable and easy to install.

Unlike traditional floodlights that are sited at single locations around a work site the UtilityLite's flexibility enables the entire work area to be surrounded by a continual LED flex of light and thus is lit in its entirety.

FEATURES

- Waterproof (IP65) construction can be used in indoor or outdoor areas
- Thanks to its all round light emitting capability shadow and dark spots are greatly reduced or in many cases totally eliminated
- Cool running LED light source low heat development eliminates risk of burns or damage to shelter
- Instant illumination, even in low temperatures - no warm up or re-strike time
- Offered with powder coated hooks for easy installation

USED FOR

- Shelters
- Decontaminations Showers
